Vancouver, BC | (416) 707-1089 | whuang45@student.ubc.ca | [LinkedIn](#) | [Github](#)

EDUCATION

The University of British Columbia | Vancouver, BC

September 2024 - Present

Bachelor of Commerce, Combined Major in Business and Computer Science, Minor in Data Science

- **Relevant Coursework:** Data Cleaning and Machine Learning (DSCI 100), Computations, Programs and Programming (CPSC 110), Software Construction (CPSC 210), Computer Systems (CPSC 213), Software Engineering (CPSC 310)

EXPERIENCES

Product Development Engineer Co-op | Delta, BC

September 2026 - Present

Critical Environment Technologies

- Re-architected 20,000+ records into append-only revision logs and trigger-maintained current-state tables in **PostgreSQL**, replacing 4 text relationships with foreign keys across projects, quotes, orders, shipments, and invoices.
- Engineered a pull-request-driven **CI/CD pipeline** for a system configurator using **GitHub Actions**, integrating TestLab's AI-powered **Playwright** E2E testing alongside **Vitest** unit tests to automate validation before Vercel deployment.
- Resolved a critical webhook renewal bug by replacing delete-and-recreate logic with in-place PATCH updates and conditional cleanup on HTTP 404, preventing subscription loss during failed renewals.

Software Engineer | Remote / Toronto, ON

June 2026 - September 2026

KKC Classroom

- Shipped a high-impact product-launch waitlist in **React/Next.js**, wiring frontend components to server actions backed by a data-access layer and **PostgreSQL** for secure server-side persistence.
- Engineered an **AWS CloudFront CDN** for podcast snippets and trailer delivery, implementing long-lived Cache-Control policies to optimize browser caching and reduce repeat CloudFront requests by 40%.

Software Developer | Vancouver, BC

November 2025 - August 2026

Motion UBC, The University Of British Columbia

- Refactored legacy **PHP Laravel** backend by building **JWT-based AdminMiddleware** and protected routes to centralize auth across 10+ endpoints, improving maintainability and reducing 95% of duplicated security logic across endpoints.
- Designed and deployed a fully private GCP architecture (**Cloud Run + Cloud SQL**) for a nonprofit dashboard with 1,000+ clients, gated behind a self-configured **WireGuard VPN** with per-user cryptographic keys.

Undergraduate Teaching Assistant - CPSC 110 & CPSC 213 | Vancouver, BC

September 2025 - September 2026

Faculty of Computer Science, The University of British Columbia

- Mentored **600+ first-year CPSC 110 students** in program design, abstraction, and testing through labs and office hours.
- Co-led weekly **CPSC 213** systems programming labs with a senior PhD teaching assistant, guiding students through complex memory and concurrency exercises and translating low-level concepts into clear, actionable explanations.

PROJECTS

My Toolbox | *React, Tailwind CSS, Node.js, MongoDB Atlas, Auth0, Gemini API, Vercel*

January 2026 - June 2026

- Created a **Google Gemini API**-powered, gamified interview prep platform enabling users to practice and receive AI-generated feedback; fully deployed on **Vercel** with a custom domain.
- Built the back-end using **MongoDB Atlas** (user and sessions) and **Node.js** to store user and task-related data securely.
- Implemented user authentication with **Auth0**, supporting both Google and GitHub login.

Cardboard Nexus | *Java, JSON, Java Swing (GUI), JUnit*

January 2025 - April 2025

- Built an object-oriented Java-based card organizing application using **MVC** architecture with JSON-formatted data persistence and a Java Swing UI. Implemented **JUnit** suites for 4 model classes, achieving 100% test coverage.

TECHNICAL SKILLS

Programming Languages: C++ (CMake, Valgrind), Java, JavaScript, TypeScript, Python (Beautiful Soup, Numpy), SQL

Web Technologies & Databases: HTML, CSS, Vercel, Supabase, AWS ([Certified Cloud Practitioner](#)), MySQL, MongoDB

Frameworks & Libraries: React, Next.js, Node.js, Express.js, mongoose, Tailwind, Zod, Zustand
